## Define Problem Statements (Customer Problem Statement Template)

The team used the Customer Problem Statement template to understand the perspective of **Rahul**, a second-year engineering student preparing for multiple semester examinations while also learning new technical skills for internships and placements.

| PS   | I am (Customer)                                                                                          | I'm trying to                                                             | But                                                                                             | Because                                                                                     | Which makes me feel                                                     |
|------|----------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|-------------------------------------------------------------------------|
| PS-1 | Rahul, a student with study material scattered across lecture notes, PDFs, textbooks and online articles | understand and revise lengthy material within limited preparation time    | ends up spending most of his time just organizing content rather than learning it               | there is no centralized platform that consolidates and condenses his material automatically | overwhelmed and behind schedule before every exam                       |
| PS-2 | Rahul, trying to prepare revision aids like flashcards and practice questions                            | build enough flashcards and quizzes to test himself properly              | manually preparing them is repetitive and labor-intensive, so he often skips this step entirely | there is no automated way to convert his own notes into revision material                   | under-prepared and unsure whether he actually knows the material        |
| PS-3 | Rahul, juggling multiple exams and internship deadlines at once                                          | follow a study schedule tailored to his own exam dates and available time | has no personalized plan and must guess how to divide his limited time across subjects          | there is no AI layer that reasons over his exam schedule and generates a plan for him       | anxious and disorganized about how to allocate his remaining study time |
