Empathy Map

Persona: **Rahul** – Second-Year Engineering Student / End User of AI StudyBuddy.

SAYS "I have five different sources of notes for one subject and no time to merge them." "Making flashcards by hand takes almost as long as studying itself." "I never know if I'm actually ready until the exam is already happening."	THINKS "There has to be a faster way to turn my notes into something revisable." "I wish something could quiz me the way a tutor would." "I need a plan, not just a pile of material."
PERSONA — Rahul · Engineering Student / Registered User	
DOES - Collects lecture notes, PDFs, textbooks and online articles into one messy pile before exams. - Manually rewrites long chapters into shorter notes late at night. - Switches between separate apps for notes, quizzes and scheduling.	FEELS - Overwhelmed by the sheer volume of scattered content. - Frustrated by repetitive, manual revision-prep work. - Confident and in control when given a clear summary, quiz and schedule.

This empathy map directly informed the AI StudyBuddy feature set: secure material upload and storage (addresses SAYS/DOES) and Gemini-generated summaries, flashcards, quizzes and study plans (addresses THINKS/FEELS).
